

Feasibility Studies

AMC the business of mining

www.amcconsultants.com.au

Feasibility Studies

AMC applies a combination of our technical expertise and the experience gained on more than 3,500 assignments to provide our clients with accurate and timely reports to assist in defining the scope and feasibility of any proposed mining project.

Our expertise covers large or small projects, surface or underground mines and commodities from gold to base metals, iron ore to mineral sands and coal to diamonds.

Scoping Studies

Our conceptual or scoping studies for proposed surface or underground mines provide preliminary estimates of the mining method, production rate and costs to enable our clients to make informed decisions about the scale, scope and viability of a new project.

Pre-Feasibility

AMC also conducts pre-feasibility studies for new or expanded surface or underground mines, including resource evaluation, mining method studies, preliminary design, schedules and cost estimates to +/- 20 per cent.

Feasibility Studies

AMC will also manage and coordinate comprehensive final or definitive feasibility studies that provide detailed cost estimates to bankable standards of +/- 10-15 per cent and a formal technical risk assessment.

For major studies, we use specialists from disciplines including mineral processing and civil, mechanical, electrical and environmental engineering.

We utilise the most appropriate mine design software and analysis techniques, with study results presented in a format suitable for submission to company Boards or to external financiers.
